

SIPS

Students Interested in Pathology Specialties

About Us

SIPS looks to offer networking opportunities with faculty and residents, while also providing exposure to and promoting interest in the field of pathology.

What is Pathology?

Pathologists use laboratory techniques like microscopy, molecular testing, and immunohistochemistry to analyze patient samples, such as tissues, organs, and bodily fluids, and diagnose disease! They can also perform autopsies.

Past Events

- UMC Lab Tour
- Pathology Faculty Panel

No Dues!
